

## Facility Engineering Services Project Profile

**Project Title:** Georges Poultry Spiral Freezer Expansion

**Client:** Broadway Construction, George's Poultry

**Project Location:** Springdale, AR

**Project Description:** Designed a loading dock and process expansion. This included a spiral freezer, associated cooking equipment, and thermal fluid heating system.

**Major Design Elements:** The design elements included production area structure with insulated metal panels and CMU. Additionally, a loading dock expansion was constructed at one end of the expansion. A new 4 hour rated Fulton building was designed and constructed from CMU.

**Design Issues:** This was a fast paced, fast track project where FES was able to meet all construction schedule dates.

**Benefits:** Georges needed the project engineered and constructed in 17 weeks. Facility Engineering Services was able to meet the schedule for the project.
